## About Tony

Tony Miglio is a nationally sought-after test prep expert specializing in the math section of the ACT test.

Tony holds a Bachelor of Science degree in Education with a minor in Psychology. He has been a teacher/tutor for more than 12 years with the last 8 years specializing as a tutor for the Math section of the ACT. His former ACT students now attend notable higher learning institutions, including Notre Dame, University of Kentucky, University of Louisville, and Purdue University.

Tony has coached students all across the United States help them reach their personal ACT goals. No score is too low or too high, as he has raised the math scores by as many as 8 points, helping students on all ends of the spectrum: Helping students with lower scores achieve benchmarks, assisting other students reach the scores needed to attend their college of interest, and helping other students grow their scores to earn scholarship money for school.

## The Program

Over the past several years, Tony has devised a proven program that identifies student strengths and areas of needed improvement, and tailors instruction to address individual student needs. The program is comprised of a custom built study guide which serves as the foundation for his students. This is supplemented with teacher-led instruction and self-managed studying while incorporating elements of evidence-based learning strategies.

The teachers need between 4-6 sessions with students, depending on their need (original score). Students will have approximately 2 hours of homework after each one-on-one session. The lessons start approximately 2 months in advance of the test they wish to take.

## The Story

“Eight years ago, I was approached by a co-worker who knew that I was a former math teacher. His daughter was taking the ACT test and wondered if I had some time to assist. She and I worked for 2 months as I learned her strengths and weaknesses on the math section of the test and designed a custom approach that would work for her. When we received her results back, we learned that not only did she increase her scores, her math went up EIGHT points! The true joy from both the student and parents reinforced that this was my calling.

For the past eight years, I have continued to support students in Greater Cincinnati, as well as students across the United States, helping them raise their scores, grow their confidence and open doors for their future. I'm excited every day about the opportunities that these classes create for these young men and women. Our program works for in-person and Skype students alike as I am able to listen, learn and quickly diagnose the best path for success. I look forward to helping your student achieve their ACT Math goals.
